

**INCLUDES:**

base

center support

2 dowel nuts

2 long screws

bearing bracket

spinner disc

spinner post

6 short screws

crank wheel

crank knob

crank shaft

washer

mirror drum

illusion hoop

animation drum

4 animation wheels

4 illusion disks

4 animation strips

2 sticker sheets

Phillips screwdriver

**2**

short screws

HELPFUL TIP
 Turn screws clockwise to tighten.

ANIMATION ISN'T JUST FOR CARTOONS

Animation works by presenting many still images quickly so we see them as a continuous moving scene. Engineers and scientists can use animation to help explain things. For example, an engineer could use animation to show how a space shuttle actually would work without launching it.

OPTICAL ILLUSIONS trick our eyes to see things incorrectly, like movement when there is none.

Think About It

Innovation Station

UNLEASH YOUR INNER INNOVATOR!

There are countless ways to innovate, imagine, and play with your animation scope!

ZOTROPE Use the printed strip and UFO stickers provided to create space animation! Face stickers can go on the blank side. Then cut out your own paper strip and draw a series of images across it. Some ideas are a flying bird, a dancing stick figure, or a rabbit popping out of a hat!

Spin the zotrope backwards. Is the animation more or less effective? Try your zotrope in a brightly lit room. Then try it in a dark room shining a flashlight on the images. Which way makes the animation clearer?

PRAXINOSCOPE Use the animation wheel provided and place face stickers around it. UFO stickers work, too! Then cut out your own paper wheels. Create 12 sections and draw an image in each one. On another wheel, draw two images in each section. Is the animation smoother with more images or fewer?

Animation works by presenting many still images quickly so we see them as a continuous moving scene. Engineers and scientists can use animation to help explain things. For example, an engineer could use animation to show how a space shuttle actually would work without launching it.

OPTICAL ILLUSIONS trick our eyes to see things incorrectly, like movement when there is none.

Think About It

ILLUSION MACHINE Use the blank illusion disk provided or cut out your own paper disks. Then draw unique patterns on them. Try rings, stripes, or zigzags in different sizes and colors. Which patterns and colors create your favorite illusions?

Draw your favorite illusion machine design here:

All the lines are straight! Hold a ruler along the lines to check. The orange and white blocks don't line up, so they fool the eyes and the brain into thinking the lines slope.

Did it trick your brain? Show it to others and see how many brains and eyes you can trick!

PRAXINOSCOPE Create animation using mirrors and spin it a while. How does the animation change?

ZOTROPE Place a disc on the spinner using mirrors. Place a disc on the spinner and spin it a while. How does the animation change?

ILLUSION MACHINE Create an illusion using mirrors. Place a disc on the spinner and spin it a while. How does the animation change?

TRY IT OUT Create an illusion using mirrors. Place a disc on the spinner and spin it a while. How does the animation change?

EXCELLENCE IN INNOVATION Place your seal here.
